

PRODUCT GUIDE

CHEROKEE RED

SANDSTONE

CHEROKEE RED

UTAH RED SANDSTONE

Cherokee Red offers brilliant variety and wonderful range in reddish tones. This is a high integrity sandstone. It is relatively smooth and flat, and is very durable. Cherokee sandstone is weather and frost resistant with a non-slip texture, making it an excellent stone choice for any condition.

COMMON APPLICATIONS

ARIZONA

SANDSTONE

ARIZONA

ARIZONA HICKORY, PINK OAK AND ROSA

Our Arizona sandstone is far superior in hardness, durability and quality to other Arizona sandstones. It comes in a variety of red tones. Our Rosa contains the most red compared to Pink Oak dark which is light pink with just a hint of redness. Hickory has the most beige of these sandstone varieties, with hints of pink.

COMMON APPLICATIONS

TORREY

SANDSTONE

A photograph of a red stone wall with the text "RED BUTTE GARDEN &" in white serif font. The wall is made of irregular red stones. Above the wall, a window with white frames is visible. To the right, some yellow leaves of a tree are seen. At the bottom, two brass-colored vent pipes protrude from the wall.

RED BUTTE GARDEN &

TORREY RED AND TORREY BUFF

RIPPLED UTAH SANDSTONE

Torrey Buff and Torrey Red are cross-bedded sandstones featuring a wonderfully rippled surface texture indicative of the Southern Utah desert. This stone boasts incredible color range from light to dark making it an excellent choice for accent or feature stone.

BAKER GOLD

QUARTZITE

BAKER GOLD

NATURALLY RECTANGULAR QUARTZITE

This Nevada ledgestone is a gray and gold quartzite with gold and brown edges. It is extremely hard, and naturally fractures into rectangular patterns making it perfect for a variety of indoor and outdoor architectural projects. Originally formed as sandstone, quartzite has an above-average resistance to scratches and blemishes than other materials and requires little maintenance.

COMMON APPLICATIONS

MOUNTAIN ASH

GRANITE

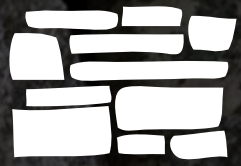

MOUNTAIN ASH GRANITE

FINE-GRAINED IDAHO GRANITE

Granite is a natural stone formed in the Earth's crust. It is the result of the cooling of lava composed of minerals. The different colors and patterns in the granite are a direct result of specific amounts of minerals. Our fine grain granite ranges from medium to dark gray and contains bronze streaks.
